SUMMARY

Full-stack engineer who builds AI-native systems end-to-end — from real-time LLM pipelines to defense-grade simulations. Shipped production systems solo in under 24 hours; contributed to naval combat training platform now deployed internally at TASL. Thrives in fast-moving, ambiguous environments where ownership and speed matter.

SKILLS

AI / LLM: OpenAI API, Whisper, LangChain, LLM Pipelines, Prompt Engineering, AI Workflow Automation

Languages: TypeScript, JavaScript, Python, Java, C, C++, SQL

Frontend: Next.js, React.js, Tailwind CSS, shadcn/ui

Backend: Node.js, Express.js, FastAPI, Django, Flask, WebSockets, REST APIs

Databases: PostgreSQL, MongoDB, Redis, Apache Kafka, Convex, Supabase, Prisma, Firebase

DevOps: Docker, Kubernetes, AWS, GCP, NGINX, Vercel, GitHub Actions

EXPERIENCE

Software Engineering Intern — Tata Advanced Systems Limited (TASL) Dec 2024 – Feb 2025 · Mumbai, MH

Confidential Defense Project · Combat Training System (CTS-71)

- Architected CTS-71 — a full-stack naval combat training simulation (React + Node.js + WebSockets) sustaining sub-100ms UI response across concurrent sessions; replaced live drills and cut estimated training costs by 60–70%.
- Built a real-time performance-data pipeline for objective cadet evaluation with multi-stage scenario progression, scoring logic, and live session tracking.

PROJECTS

CTS-71 — Naval Combat Training Simulation Platform TASL Internship — 2024–25 · Defense / Full-Stack

React · Node.js · WebSockets · MongoDB

- Designed full system architecture for a simulation platform sustaining sub-100ms UI response across concurrent trainee sessions; adopted internally at TASL as a live-exercise replacement.
- Built a real-time performance-data pipeline for objective cadet scoring with multi-stage scenario progression, cutting estimated training costs by 60–70%.

Meeting Bot — AI Meeting Intelligence Engine Industrial Hackathon 2026 — 1st Place

Next.js · TypeScript · Whisper · LLM API · Convex

- Built solo in <24 hrs: live speech transcription via Whisper (<2s latency) piped into an LLM to auto-generate structured meeting minutes, key decisions, and owner-tagged action items.
- Won 1st place at Industrial Hackathon 2026 (multi-company field) for production-readiness and immediate business applicability.

[Live Demo](#) · [GitHub](#)

Automate Flow — Visual No-Code AI Automation Platform Personal Project — Ongoing

Next.js · React Flow · LLM API

- Built a drag-and-drop canvas for orchestrating multi-step AI and API pipelines — no code required; LLMs drive intelligent pipeline suggestions, step generation, and real-time execution feedback.
- Designed to let non-engineers automate complex workflows end-to-end, handling branching logic and API chaining visually.

ACHIEVEMENTS

- 1st Place — Industrial Hackathon 2026 (Meeting Bot) · Competitive multi-company engineering challenge.
- 1st Place — Internal Hackathon 2025 (Samadhan) · Outranked 70+ teams across all departments.
- 3+ National Hackathons — SPIT Hackathon 2025, InnovGenius Ideathon × TCS, Recursion 6.0, CodeCrafterz 2.0 and more.
- Published Research — Co-authored peer-reviewed paper on Combat Management & Training Systems. [View Paper](#)

EDUCATION

Vidyalankar Polytechnic, Mumbai — Diploma in Computer Engineering 2023 – 2026

Sai Holy Faith High School, Mumbai — SSC (10th) · 90.8% Completed 2023
